

Test Cases to run on Device Farm

List of test cases to cover the **functionality** of the DNS Firewall Client Application on various platforms:

 Order of priority

Windows
Android
Chromebook
iOS
Mac

 Activation Link (Prd)

Device Group:

List of blocked domains:

- **Malware** - Test that blocks work - try 1 or 2 of the URLs below, and ensure you get a proper block, and if you are doing a dig, that the EDE code matches - EDE: 17 (Filtered): (CIRA DNS Firewall - Malware Blocked)
 1. [malware-test-1.cira.ca](#)
 2. [malware-test-2.cira.ca](#)
 3. [malware-test-3.cira.ca](#)
- **Botnet** - Test that blocks work - try 1 or 2 of the URLs below, and ensure you get a proper block, and if you are doing a dig, that the EDE code matches - EDE: 17 (Filtered): (CIRA DNS Firewall - Botnet Blocked)
 1. [botnet-test-1.cira.ca](#)
 2. [botnet-test-2.cira.ca](#)
 3. [botnet-test-3.cira.ca](#)
- **Phishing** - Test that blocks work - try 1 or 2 of the URLs below, and ensure you get a proper block, and if you are doing a dig, that the EDE code matches - EDE: 17 (Filtered): (CIRA DNS Firewall - Phishing Blocked)
 1. [phishing-test-1.cira.ca](#)
 2. [phishing-test-2.cira.ca](#)
 3. [phishing-test-3.cira.ca](#)
- **Content Blocks** - Test that blocks work - try 1 or 2 of the URLs below, and ensure you get a proper block, and if you are doing a dig, that the EDE code matches - EDE: 17 (Filtered): (CIRA DNS Firewall - Category Blocked)
 1. [saq.com](#)
 2. [thebeerstore.ca](#)
 3. [adult-test-1.cira.ca](#)
 4. [adult-test-2.cira.ca](#)
 5. [adult-test-3.cira.ca](#)
- **Manually Added Blocks** - Test that these two URLs work, and ensure you get a proper block, and with a dig, that the EDE code matches - EDE: 17 (Filtered): (CIRA DNS Firewall - URL Blocked)
 1. [red.com](#)
 2. [blue.com](#)
 3. [Tiktok.com](#)
 4. [Snapchat.com](#)

List of domains to test for Local Domain Bypass

- TBD - depends on network config and access

Applications to test on mobile devices (as applicable):

- General web surfing in a browser: News, any websites (Tip: using the Google App for browsing the we seems to generate more dns traffic)
- Social Media: Instagram, TikTok, reddit
- Streaming: Youtube, Netflix

Functionality	Test Scenario	Test Steps	Device (s) to run on	Notes
Installation	Installing the client	- Clicking on the activation link should redirect to the respective app stores based which device its clicked from (for windows it would download an msi) - Install the client successfully	All Platforms	
Activation	Activating the client	- Open the client - Paste the activation link - Provide the first and last name - The client should be activated successfully - The status should be: - When Onnet: "Protected by Local Network" - When Offnet: "Protected by CIRA DNS Firewall"	All Platforms	
Blocks	Validating the blocks	- Access any of the blocked domains from the list above should be blocked (For non https sites a block page should be rendered) - Accessing any other websites should work seamlessly without any lag - Ensure apps that are blocked should not work	All Platforms	
Normal Operation	Validating normal activity is unaffected	- Ensure the following websites are working properly. google.com youtube.com facebook.com instagram.com chatgpt.com x.com reddit.com whatsapp.com bing.com cbc.ca bbc.com cnn.com - For mobile devices try the apps listed above and they should function seamlessly	All Platforms	
Local Domain Bypass	Validating the local domain bypass	Should be able to access the internal domains/urls listed above.	All Platforms	
Network Switching	Switching between wifi and cellular	- For mobiles devices switch from wifi to cellular and validate that blocked domains are not accessible and rest of the internet access stays intact - Switch it back from cellular to wifi and validate the same i.e the blocks and internet access are still functional	All Platforms	
Device Hibernation/In-Activity	Does the app still work after the device resumes from a period of inactivity	Leave the device idle over night, let it go into hibernation/sleep/lockstate. Open the device, and go into the app, ensure blocks and normal browsing are working as expected.	All Platforms	
Deactivation	Disabling the client	- Disable the client - Internet access should still be intact, should be able to browse any websites	All Platforms	
Uninstallation	Uninstalling the client	The client has to uninstalled successfully	All Platforms
